

```

1  |----- MODULE Paxos -----|
   |
   | This is a specification of the Paxos algorithm without explicit leaders or learners. It refines the
   | spec in Voting.
   |
   | In this version:
   |
   | - Phase1a(b) messages can be duplicated (realized as adding it to a set in TLA+).
   |
   | - Phase1b(a): Due to the enabling condition " $\wedge m.bal > maxBal(a)$ ", the "1b" messages are
   | sent conditionally.
   |
   | - Phase2a(b, v) is enabled only if the proposer of b has not issued "2a" messages before. That is,
   | ballots are "client-restricted" in terms of GS2Paxos@arXiv2019. Thus, OneValuePerBallot (and
   | hence, OneVote) holds.
   |
   | - Phase2b(a): Due to the enabling condition " $\wedge m.bal \geq maxBal[a]$ ", the acceptors can accept
   | a ballot only if it has not promised not to do that.
   |
20 | EXTENDS Integers, TLC
   |-----|
21 |
22 | CONSTANT Value, Acceptor, Quorum
   |
24 | ASSUME QuorumAssumption  $\triangleq$ 
25 |      $\wedge \forall Q \in Quorum : Q \subseteq Acceptor$ 
26 |      $\wedge \forall Q1, Q2 \in Quorum : Q1 \cap Q2 \neq \{\}$ 
   |
28 | Ballot  $\triangleq Nat$ 
29 | None  $\triangleq$  CHOOSE v : v  $\notin Ballot$ 
   |
31 | Message  $\triangleq$ 
32 |     [type : {"1a"}, bal : Ballot]
33 |      $\cup$  [type : {"1b"}, acc : Acceptor, bal : Ballot,
34 |         mbal : Ballot  $\cup$  { - 1 }, mval : Value  $\cup$  { None }]
35 |      $\cup$  [type : {"2a"}, bal : Ballot, val : Value]
36 |      $\cup$  [type : {"2b"}, acc : Acceptor, bal : Ballot, val : Value]
   |-----|
37 |
38 | VARIABLE maxBal, maxVal, msgs
39 |           maxVVal, maxVVal, maxVVal
40 |           maxVVal, maxVVal, maxVVal
41 |           msgs
   |
   | maxBal[a]: the largest ballot number a has seen
   | maxVVal[a], maxVVal[a] is the vote with the largest
   | ballot number cast by a; it is { - 1, None } if a has not cast any vote.
   | The set of all messages that have been sent.
   |
43 | Send(m)  $\triangleq msgs' = msgs \cup \{m\}$ 
   |
45 | vars  $\triangleq \langle maxBal, maxVVal, maxVVal, msgs \rangle$ 
   |
   | NOTE: The algorithm is easier to understand in terms of the set msgs of all messages that have
   | ever been sent. A more accurate model would use one or more variables to represent the messages
   | actually in transit, and it would include actions representing message loss and duplication as well
   | as message receipt.

```

In the current spec, there is no need to model message loss because we are mainly concerned with the algorithm's safety property. The safety part of the spec says only what messages may be received and does not assert that any message actually is received. Thus, there is no difference between a lost message and one that is never received. The liveness property of the spec that we check makes it clear what messages must be received (and hence either not lost or successfully retransmitted if lost) to guarantee progress.

63 $TypeOK \triangleq$
 64 $\quad \wedge \quad maxBal \in [Acceptor \rightarrow Ballot \cup \{-1\}]$
 65 $\quad \wedge \quad maxVbal \in [Acceptor \rightarrow Ballot \cup \{-1\}]$
 66 $\quad \wedge \quad maxVal \in [Acceptor \rightarrow Value \cup \{None\}]$
 67 $\quad \wedge \quad msgs \subseteq Message$

68 $|$
 69 $Init \triangleq$
 70 $\quad \wedge \quad maxBal = [a \in Acceptor \mapsto -1]$
 71 $\quad \wedge \quad maxVbal = [a \in Acceptor \mapsto -1]$
 72 $\quad \wedge \quad maxVal = [a \in Acceptor \mapsto None]$
 73 $\quad \wedge \quad msgs = \{\}$

74 $|$
 In an implementation, there will be a leader process that orchestrates a ballot. The ballot b leader performs actions $Phase1a(b)$ and $Phase2a(b)$. The $Phase1a(b)$ action sends a phase 1a message that begins ballot b .

80 $Phase1a(b) \triangleq$
 81 $\quad \wedge \quad Send([type \mapsto "1a", bal \mapsto b])$
 82 $\quad \wedge \quad UNCHANGED \langle maxBal, maxVbal, maxVal \rangle$

Upon receipt of a ballot b phase 1a message, acceptor a can perform a $Phase1b(a)$ action only if $b > maxBal[a]$. The action sets $maxBal[a]$ to b and sends a phase 1b message to the leader containing the values of $maxVbal[a]$ and $maxVal[a]$.

88 $Phase1b(a) \triangleq$
 89 $\quad \wedge \quad \exists m \in msgs :$
 90 $\quad \quad \wedge \quad m.type = "1a"$
 91 $\quad \quad \wedge \quad m.bal > maxBal[a]$
 92 $\quad \quad \wedge \quad maxBal' = [maxBal \text{ EXCEPT } ![a] = m.bal] \quad \text{make promise}$
 93 $\quad \quad \wedge \quad Send([type \mapsto "1b", acc \mapsto a, bal \mapsto m.bal,$
 94 $\quad \quad \quad mbal \mapsto maxVbal[a], mval \mapsto maxVal[a]])$
 95 $\quad \wedge \quad UNCHANGED \langle maxVbal, maxVal \rangle$

97 $NoBackInTime \triangleq$
 98 $\quad \forall m \in msgs : m.type = "1b" \Rightarrow m.mbal < m.bal$

The $Phase2a(b, v)$ action can be performed by the ballot b leader if two conditions are satisfied: (i) it has not already performed a phase 2a action for ballot b and (ii) it has received ballot b phase 1b messages from some quorum Q from which it can deduce that the value v is safe at ballot b . These enabling conditions are the first two conjuncts in the definition of $Phase2a(b, v)$. The second conjunct, expressing condition (ii), is the heart of the algorithm. To understand it, observe that the existence of a phase 1b message m in $msgs$ implies that $m.mbal$ is the highest ballot number less than $m.bal$ in which acceptor $m.acc$ has or ever will cast a vote, and that $m.mval$ is the value it voted for in that ballot if $m.mbal \neq -1$. It is not hard to deduce from this that the second conjunct implies that there exists a quorum Q such that $ShowsSafeAt(Q, b, v)$ (where $ShowsSafeAt$ is defined in module *Voting*).

The action sends a phase 2a message that tells any acceptor a that it can vote for v in ballot b , unless it has already set $maxBal[a]$ greater than b (thereby promising not to vote in ballot b).

```

118  $P2C(b, v) \triangleq$ 
119    $\exists Q \in Quorum :$ 
120     LET  $Q2bv \triangleq \{m \in msgs : m.type = "2b" \wedge m.acc \in Q \wedge m.bal < b\}$ 
121     IN    $\vee Q2bv = \{\}$ 
122          $\vee \exists m \in Q2bv :$ 
123            $\wedge m.val = v$ 
124            $\wedge \forall mm \in Q2bv : m.bal \geq mm.bal$ 

126  $Phase2a(b, v) \triangleq$ 
127    $\wedge \neg \exists m \in msgs : m.type = "2a" \wedge m.bal = b$ 
128    $\wedge \exists Q \in Quorum :$ 
129     LET  $Q1b \triangleq \{m \in msgs : m.type = "1b" \wedge m.acc \in Q \wedge m.bal = b\}$ 
130     LET  $Q1bv \triangleq \{m \in Q1b : m.mbal \geq 0\}$ 
131     IN    $\wedge \forall a \in Q : \exists m \in Q1b : m.acc = a$ 
132          $\wedge \vee Q1bv = \{\}$ 
133          $\vee \exists m \in Q1bv :$ 
134            $\wedge m.mval = v$ 
135            $\wedge \forall mm \in Q1bv : m.mbal \geq mm.mbal$ 
136    $\wedge Send([type \mapsto "2a", bal \mapsto b, val \mapsto v])$ 
137    $\wedge Assert(P2C(b, v), "P2C Fails!")$ 
138    $\wedge UNCHANGED \langle maxBal, maxVbal, maxVal \rangle$ 

```

The $Phase2b(a)$ action is performed by acceptor a upon receipt of a phase 2a message. Acceptor a can perform this action only if the message is for a ballot number greater than or equal to $maxBal[a]$. In that case, the acceptor votes as directed by the phase 2a message, setting $maxVbal[a]$ and $maxVal[a]$ to record that vote and sending a phase 2b message announcing its vote.

Note: It also sets $maxBal[a]$ to the message's ballot number. Otherwise,

- (1) *NoBackInTime* for $Phase1b$ does not hold.
- (2) "Non-Increasing Error" assertion in $Phase2b(a)$ fails.
- (3) $P2C$ assertion for $Phase2a$ does not hold ???

```

152  $Phase2b(a) \triangleq$ 
153    $\exists m \in msgs :$ 
154      $\wedge m.type = "2a"$ 
155      $\wedge m.bal \geq maxBal[a]$ 
156      $\wedge maxBal' = [maxBal \text{ EXCEPT } ![a] = m.bal]$ 
157      $\wedge maxVbal' = [maxVbal \text{ EXCEPT } ![a] = m.bal]$ 
158      $\wedge Assert(maxVbal'[a] \geq maxVbal[a], "Non-Increasing Error!")$ 
159      $\wedge maxVal' = [maxVal \text{ EXCEPT } ![a] = m.val]$ 
160      $\wedge Send([type \mapsto "2b", acc \mapsto a, bal \mapsto m.bal, val \mapsto m.val])$ 

```

In an implementation, there will be learner processes that learn from the phase 2b messages if a value has been chosen. The learners are omitted from this abstract specification of the algorithm.

```

166 |
167  $Next \triangleq$ 
168    $\vee \exists b \in Ballot :$ 

```

169 $\vee Phase1a(b)$
 170 $\vee \exists v \in Value : Phase2a(b, v)$
 171 $\vee \exists a \in Acceptor : Phase1b(a) \vee Phase2b(a)$

173 $Spec \triangleq Init \wedge \Box[Next]_{vars}$

174 |
 We now define the refinement mapping under which this algorithm implements the specification in module *Voting*.

As we observed, votes are registered by sending phase 2b messages. So the array *votes* describing the votes cast by the acceptors is defined as follows.

185 $votes \triangleq [a \in Acceptor \mapsto$
 186 $\{ \langle m.bal, m.val \rangle : m \in \{ mm \in msgs : \wedge mm.type = "2b" \}$
 187 $\wedge mm.acc = a \} \}$

We now instantiate module *Voting*, substituting the constants *Value*, *Acceptor*, and *Quorum* declared in this module for the corresponding constants of that module *Voting*, and substituting the variable *maxBal* and the defined state function *votes* for the correspondingly-named variables of module *Voting*.

194 $V \triangleq \text{INSTANCE } Voting$

196 $Consistency \triangleq V!C!Inv$ Only about "chosen": $TypeOK \wedge Cardinality(chosen) \leq 1$

197 $StrongConsistency \triangleq V!Inv$ $TypeOK \wedge VotesSafe \wedge OneValuePerBallot$

199 THEOREM $Spec \Rightarrow V!Spec$

200 |
 Here is a first attempt at an inductive invariant used to prove this theorem.

205 $Inv \triangleq \wedge TypeOK$
 206 $\wedge \forall a \in Acceptor : \text{IF } maxVBal[a] = -1$
 207 $\text{THEN } maxVal[a] = None$
 208 $\text{ELSE } \langle maxVBal[a], maxVal[a] \rangle \in votes[a]$
 209 $\wedge \forall m \in msgs :$
 210 $\wedge (m.type = "1b") \Rightarrow \wedge maxBal[m.acc] \geq m.bal$
 211 $\wedge (m.mbal \geq 0) \Rightarrow$
 212 $\langle m.mbal, m.mval \rangle \in votes[m.acc]$
 213 $\wedge (m.type = "2a") \Rightarrow \wedge \exists Q \in Quorum :$
 214 $V!ShowsSafeAt(Q, m.bal, m.val)$
 215 $\wedge \forall mm \in msgs : \wedge mm.type = "2a"$
 216 $\wedge mm.bal = m.bal$
 217 $\Rightarrow mm.val = m.val$
 218 $\wedge V!Inv$

219 |
